Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- 1.) The diatomic/multiatomic bridges defined by the claims.
- 2.) The atoms on either side of the bridge structures.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1796

The claims are deemed to correspond to the species listed above in the following manner:

They are components of the inventive feature materials of the claim defined processes and products

The following claim(s) are generic:

Claim 29 is generic for Group 1.

Claims 1-8, 28-30, 35-36, 39, and 51-54 are generic for group 2.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: each species has distinct and independent structure and/or composition, and are not obvious variants.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Additional Notes

In order to expedite prosecution, the claims should be reviewed closely for formal and informal matters, clarity, definiteness, dependency, dependency of parts of claims, defining claim components by reference outside of the claims, and other problems related to understanding the invention defined by the claims, and appropriate amendments for clarification should be made on reply.

No telephone call was made for this election requirement so as to permit applicants the opportunity to clarify the claims for examination on the merits.

An election of species requirement for the "other ligands" {see beginning at page 12} of applicants' claims is not seen to be required at this time, in that these do not appear to be critical to the inventive feature of the instant invention. However, this understanding may need to be reconsidered if amendment and/or clarification of the claims attach inventive features to the selection of this claim element.
